1.Storage

It is recommended that LEDs out of their original packaging are used within three months. For extended storage out of their original packaging, it is recommended that the LEDs be stored in a sealed container with appropriate desiccant or in desiccators with nitrogen ambient.

2. Cleaning

Use alcohol-based cleaning solvent such as isopropyl alcohol to clean the LEDs if necessary.

3.Soldering

When soldering leave a minimum of 2mm clearance from the base of the lens to the soldering point.

Dipping the lens into the solder must be avoided.

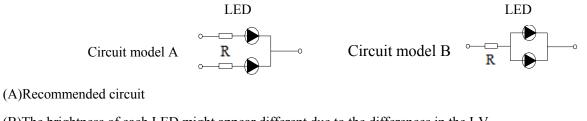

Do not apply any external stress to the lead frame during soldering while the LED is at high temperature. Recommended soldering conditions:

Solderin	ng iron	Wave soldering		
		Pre-heat	100°C Max	
Temperature	320°C Max	Pre-heat time	60 sec.Max	
	3 sec.Max	Solder wave	260°C Max	
Soldering time	(one time only)	Soldering time	5 sec.Max	

Note: Excessive soldering temperature and/or time might result in deformation of the LED lens or catastrophic failure of the LED.

4.Drive Method

An LED is a current-operated device, In order to ensure intenity uniformity on multiple LEDs connected in parallel in an application, it is recommended that a current limiting resistor be incorporated in the drive circuit, in series with each LED as shown in Circuit A below.

(B)The brightness of each LED might appear different due to the differences in the I-V characteristics of those LEDs.
